

```
#include <stdio.h>

int main() {
    float height;           // for storing height
    double balance;         // for storing bank balance
    char phone[20];         // for storing phone number as
string

    // Prompt user for input
    printf("Enter your height (in meters or centimeters):
");
    scanf("%f", &height);

    printf("Enter your bank balance (in Kenya shillings):
");
    scanf("%lf", &balance);

    printf("Enter your phone number: ");
    scanf("%s", phone);    // string (no & needed for char
arrays)

    // Display collected inputs in formatted manner
    printf("\n----- User Details ----- \n");
    printf("Height: %.2f\n", height);
    printf("Bank Balance: KSh %.2lf\n", balance);
    printf("Phone Number: %s\n", phone);
    printf("----- \n");

    return 0;
}
```
